

HOW TO MEASURE YOUR COUNTERTOPS

A DIY GUIDE

1. Draw a 2D sketch of the general shape of your countertops.
Don't worry about drawing in proportion.
2. Indicate where there are walls in the space by placing a "W" on the lines that run along the walls.
3. Measure the countertop lengths along the wall in the back, not along the front (in inches).
If the countertop doesn't touch any walls (such as an island), just measure the entire perimeter of the countertop.
4. Write down the lengths in the appropriate space on your drawing.
5. Measure the depth of the countertop from the wall to the front of the countertop.
Standard countertop depth in kitchens is 26 inches.
6. Label where your sink(s), cooktop, stove, and fridge will be. Also label any islands or bartops.
7. Repeat this process for every section of your countertop.
8. Make sure to measure bar tops, islands, peninsulas, or any other miscellaneous areas that you would like to include.
9. Send us some pictures of your space!

Tools Needed:

- Tape Measure
- Pencil
- Paper
